PARTNER PRESENTATION

Great ideas start when **people come together**.

The **Tourism Technology Festival** brings developers, tech partners, and tourism industry leaders together for **24 hours of creativity, collaboration & innovation** at the “Alles für den GAST” trade fair in Salzburg.

It's more than a hackathon. It's a **vibrant community** where real-world tourism challenges meet fresh perspectives, bold ideas, and new technologies. Through inspiration, teamwork, and a shared passion for creating something new, we turn offline connections into digital solutions with **real-world impact.**

Real Connections. Digital Creations. Together, we shape the future of tourism.

WELCOME FROM THE INITIATORS

Stefan Kreppel

Head of Digitalisierung, Innovation, Strategie und Nachhaltigkeit

WHAT IT'S ALL ABOUT

WHAT A JOURNEY.

WHAT A COMMUNITY.

From the very first ideas to **unforgettable moments**, **late-night coding sessions, new friendships and incredible team spirit**.

We've shared challenges, celebrated breakthroughs, laughed, learned and created **memories that go far beyond technology**.

DIFFERENT PEOPLE. SAME PLACE.
ONE INCREDIBLE SPIRIT.

And the best part? The story is still being written.

Here's to the moments that **brought us together** – and everything that's yet to come.

EXTRAORDINARY IDEAS START WITH GREAT PEOPLE.

FROM THE FIRST HACK TO WHAT'S NEXT

tourism technology festival 26

explore every thing

tourism technology festival 26

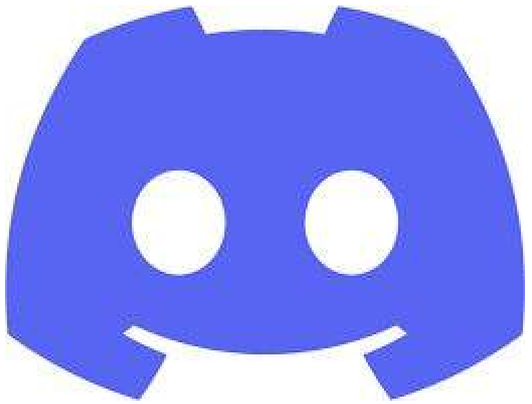

BEFORE WE START...

COMMUNICATION

- Please make sure that at least one member of your team has joined our **Discord community**. You can use the **QR code** or simply check your emails for the invitation!

- We'll be using Discord as our main hub for **updates, sharing resources**, and **important announcements** throughout the event. We highly recommend that everyone joins to stay in the loop!

WIFI + BELONGINGS

WLAN-Name: Tourism Technology Festival

Passwort: TTF082026

This Area is only for Hackathon Participants, nevertheless please take care of your belongings. Your Ticket allows you to visit the ‘Alles für den GAST’ at any point. Security is always present.

Smoking is possible in smoking areas at GAST.

LOCATION

We have seperated the hackathon area in different sections:

- hacking area
- meet area
- relax area

All presentations will happen in this room we are in right now.

FOOD & DRINKS

☕ **STAY FUELED. KEEP CREATING!** 🍎

We've got you covered!

From the start of the hackathon until the very last minute, **SiSiSi** will be available to keep you fueled and happy whenever hunger strikes.

Expect **fresh fruit, snacks, cake, coffee and refreshing drinks** – everything you need to keep your energy and creativity flowing throughout the 24 hours.

Your ticket also gives you access to the ‘Alles für den GAST’ trade fair, where you can explore, discover and taste your way through the exhibition.

Just make sure to plan your fair visits around your hacking time.

No fixed meal times. Just good food, good vibes and plenty of energy!

Drinks

There are many great drinking options **in the fridges** and at the coffee machine to use, please take at any time.

SLEEP + HYGIENE

- You can **stay here onsite overnight**, there will be security present all night, please make sure that you for no reason go on the premise but **stay around the hackathon area**.

- You can lie down wherever you feel comfortable on this floor. We have a separate room for the ladies to lay down.

- The restrooms are cleaned especially sunday morning.

- Of course, you're free to leave the venue at any time. If you've got a comfy bed nearby, feel free to make the most of it!

CODE OF CONDUCT

Please follow our code of conduct:
Code of Conduct

In short: Just be nice!

Please contact us if you experience any issue!

01 Off-Season Potential Nobody Can Prove

Destinations-Netzwerk Austria

Altenmarkt-Zauchensee · Eben
Radstadt · Wagrain-Kleinarl

Topic

Austrian destinations **know their peak weeks well**. The quieter weeks are harder to read.

In a dna survey of **53 destination management organisations**, mostly answered by managing directors, 75.5% named searching for and compiling data as their biggest time sink, and only 28% get their data through automated interfaces.

The data exists: bed availability and prices, mobile network data, guest cards, weather. It sits in separate systems and rarely in a form that a supervisory board, a municipal council or local businesses can use.

Sources: dna member survey 2026 (n = 53); Land Salzburg, Tourismusstatistik 2024/25

01 Off-Season Potential Nobody Can Prove

Destinations-Netzwerk Austria

Altenmarkt-Zauchensee · Eben
Radstadt · Wagrain-Kleinarl

Topic

Salzburger Sportwelt has **two off-seasons**, one in spring and one in autumn. In 2024/25 the region recorded 4.9 million overnight stays, 59% of them in winter, with February as the peak month. Across the province of Salzburg, April and May 2025 each brought about 1.25 million overnight stays, less than a third of February. Beds are free, some lifts and restaurants close, and every year the same debate starts about longer opening hours, extra campaigns and who pays for them.

To make a case, **the managing director needs answers**: When exactly does each off-season start and end? Which guests come anyway, from which markets, and how much do they spend? Which of the two periods has more potential? Numbers without context mislead: in March 2025 overnight stays in Salzburg fell by 12.8%, in April they rose by 36%. Easter had moved from March to April.

Sources: dna member survey 2026 (n = 53); Land Salzburg, Tourismusstatistik 2024/25

01 Off-Season Potential Nobody Can Prove

Destinations-Netzwerk Austria

Altenmarkt-Zauchensee · Eben
Radstadt · Wagrain-Kleinarl

Challenge

1. How can a destination team find untapped potential in its off-season, by week, place, source market or guest segment, without a data analyst on staff?
2. How can a managing director turn these findings into a case that a supervisory board, a municipal council or local businesses understand and trust within a few minutes?
3. How can this work for many destinations of different sizes, while each data partner keeps control over its own data?

Data: Availabilites and prices (Lux Active), Mobile network data (Hutchison Drei); Guest card data and further sources from the region. All data is available at the TTF Data Space. SalzburgerSportwelt (Altenmarkt-Zauchensee, Eben, Radstadt, Wagrain-Kleinarl) is the pilot region, staff from its tourism associations are on site.

02 Hotel Data Nobody Has Time to Read

Topic

Hotels collect plenty of data: bookings and occupancy in the PMS, guest preferences in the CRM, clicks on the website, answers to pre-arrival mails. Most of it never reaches the people who deal with guests. 27% of surveyed hotels run more than seven technology platforms, 27% spend more than 11 hours a week reconciling data, and 91% still rely at least partly on manual reporting.

In a hotel with 80 or 150 rooms, **nobody at reception has time to open four systems** before a guest arrives. So a family checks in the evening before a rainy day and nobody mentions the indoor programme. A guest who looked at the suite page twice gets the standard room. Next weekend's occupancy drops below forecast while a school break starts in a key source market, and the hotel notices on Monday. The information existed. It reached nobody who could act on it.

Sources: Hotel Operations Index 2026; ÖHV Technologieumfrage 2025

02 Hotel Data Nobody Has Time to Read

Challenge

1. How can hotel staff learn which guests and situations need their attention today, without searching through several systems?

2. Which combinations of hotel, guest and outside data (weather, events, holidays) actually change what a hotel should do, and which are noise?

3. How can staff without data or marketing expertise understand a situation fast enough to act on it during a shift?

03 Access Information Nobody Keeps Current

Topic

Traunsee-Almtal, the **eastern gateway to the Salzkammergut**, offers lake and mountains, culture in Gmunden and outdoor activities all year. Who can actually use these offers is harder to say. According to Statistics Austria, **14.1% of people in Austrian private households report lasting mobility impairments**.

Many more guests are stopped by something else: the family with a pushchair, the hiker with a sprained ankle, the guest who cannot read a weather warning in German, the visitor without a smartphone facing an app-only ticket, the group that reaches the trailhead at 17:30 after the last bus left at 17:00.

03 Access Information Nobody Keeps Current

Topic

Today a hotel, a restaurant or a trail is marked "accessible", or it is not.

That answers none of the real questions: How many steps lead to the entrance? Does the hiking bus take cash? When does the last bus leave in November? The answers change with the season, the weather and the timetable, and nobody in the region has collected them. Bus drivers, postal carriers and hosts pass them on informally every day. A one-off survey would be outdated within a year.

03 Access Information Nobody Keeps Current

Challenge

1. How can a region collect what stops people, whether physical, digital, linguistic or financial, from the residents, hosts, drivers and guests who already know it? And what makes contributing worth their while?
2. How does a single observation, such as "three steps, no handrail" or "card only, no cash", become information a stranger can rely on, and how does it stay current without a central team maintaining it?
3. How does the right information reach a guest at the moment it matters: while booking, at the bus stop, at the trailhead or at the till?

The partners bring existing infrastructure, timetable and trail data for the region, and access to local hosts and residents. A vionmo representative is on site on both festival days. Supported by Mastercard and UnternehmerTUM.

04 Challenge

OVERNIGHT DATA WITHOUT EXPLANATION

04 Overnight Data Without Explanation

Challenge Team

Raphael Tonitz

TVB Paznaun – Ischgl

04 Overnight Data Without Explanation

Topic

Paznaun-Ischgl has the numbers: daily overnight stays for the previous year, a forecast for the coming months, the actual figures and the available bed capacity. For this challenge the TVB and Feratel provide 244 days of overnight data, from summer 2026 through the 2026/27 winter season, and 88 days of bed capacity for the early winter.

These datasets are reported side by side and rarely analysed together. A deviation between forecast and actual stays is visible, but the reason stays unclear: weather, holidays in a source market, an event, a systematic error in the forecast, or a gap in the data. Whether demand approaches capacity on certain weekends usually becomes clear afterwards. By then the team can no longer steer demand or adjust its planning.

04 Overnight Data Without Explanation

Challenge

1. Where does demand fall behind the forecast or previous year, where is capacity tight or unused – and why?
2. Which concrete marketing actions follow (what, when, where, for which market), and which comes first – ranked by effect, lead time, feasibility and confidence?
3. How can each recommendation show what it is based on and how reliable it is, given gaps, zero values and limited data history?

tourism technology festival 26

TTG TOURISMUS TECHNOLOGIE GMBH

05 Knowledge AI Assistants Cannot Find

Challenge Team

Johannes Auer

Oberösterreich Tourismus

05 Knowledge AI Assistants Cannot Find

Topic

Upper Austria is well documented digitally. Hiking and cycling trails, sights, lakes, restaurants and events are maintained in TOURDATA. At the same time, **more and more open data is available**: geodata, weather, water temperatures, bathing water quality, cultural heritage archives. **For guests, these two worlds rarely meet.** A trail is a line on a map, a castle is an opening time, an event is a date and a venue.

Meanwhile, guests are changing how they plan. More and more often they ask an AI assistant: “What should we do this afternoon?”, “Can I swim in the Attersee today?”, “Where can I buy local cider on the way to Steyr?” An assistant can only recommend what it can find, understand and connect. Without a link between TOURDATA and open data, it answers vaguely or not at all, and Upper Austria is missing from the answer.

05 Knowledge AI Assistants Cannot Find

Challenge

1. How can TOURDATA and open data sources be connected to answer concrete guest questions before, during and after their visit?
2. How can this connected knowledge become a small, reusable data service (e.g. an API or MCP tool) that apps, websites and AI agents can all use?
3. How should the data be structured (e.g. schema.org, linked open data) so that AI assistants and AI search find, understand and correctly represent Upper Austria?

Possible focus areas: Conditions (Is today the right day? Weather, water temperature, bathing water quality, closures, opening hours) · Culinary (Where does regional food come from, who makes it, where can guests taste or buy it along the way?) · Culture (What happened here, who lived here, what did it look like before?). Combinations are welcome.
Teams show their services in a guest-facing demo (agent, chat, app or web). Reusable services count for more than a polished interface. We value open standards that others in tourism can build on, and transparent documentation of data sources, licences and update frequency.
Data: TOURDATA (Upper Austria Tourism), Open Data Upper Austria (data.ooe.gv.at), data.gv.at and any other open source of your choice. A representative of Upper Austria Tourism is on site on both festival days

06 Challenge

ONE FAMILY HOLIDAY, THREE BOOKING SYSTEMS

06 One Family Holiday, Three Booking Systems

Challenge Team

Alexandra Horvath
Dialogschmiede GmbH
i.A. Serfauss Fiss Ladis

06 One Family Holiday, Three Booking Systems

Topic

Serfaus-Fiss-Ladis is one of the leading family destinations in the Alps. In summer 2025 it welcomed around 175,000 guests and 955,000 overnight stays, in winter 2025/26 1.65 million. Its programme ranges from kids' clubs and guided family hikes to the bike park and behind-the-scenes cable car tours. **The content sits in at least 3 systems**: free events in Feratel, registration-based offers in the Feratel Experience Shop, bookable cable car experiences in Incert, and A–Z entries in Contwise. Each has its own detail page, design and booking flow.

A family on holiday asks 3 things: What can we do tomorrow? Does it suit our kids? How do we book it? Today they answer these questions themselves. They compare age limits across different pages, check dates against the weather, and switch between registration forms and online checkouts. A family with kids aged 4 and 9 has to work out alone which of dozens of offers fit both children and the rainy Tuesday.

06 One Family Holiday, Three Booking Systems

Challenge

1. How can a family quickly see which experiences fit their dates, their kids' ages and their interests – when those experiences live in different systems with different structures?
2. How does a list of fitting experiences become days that actually work – with realistic timing, weather in mind and the distances between places accounted for?
3. How can "this looks good" turn into registered or booked in as few steps as possible – whether an offer is free, needs a registration or is paid online?

TECHNICAL JURY

The Technical Jury will stop by on Sunday morning (9-12) to take a closer look at your project and dive deeper into your ideas and progress.

Why? Following reasons:

- **Fairness**: We want to keep things fair for everyone! The jury will make sure that projects were actually developed during the hackathon, rather than prepared in advance.
- **Pitch**: With only 2 minutes to pitch, there's not much time to show everything you've achieved. The jury visit gives you a chance to walk through your project, share your progress, and discuss your ideas in a more relaxed setting.
- **Prizes**: We've got some extra prizes to recognize teams that have created something awesome, even if it doesn't fully come across during their pitch!
